

Object: EC Regulation 1907/2006 concerning the Registration, Evaluation, Authorisation and Restriction of Chemical substances (REACH)

REACH is a European Community Regulation that requires manufacturers and importers of chemical substances to systematically assess and manage the risks that chemical substances may have on human health and the environment. Pre-registration and registration form the first stages of this process.

PIUSI identifies itself neither as manufacturer nor importer of chemical substances, only as user, for products placed on the market and for its production processes alike.

PIUSI is therefore not bound to any registration activity. In order to comply with the provisions of the REACH regulation, however, it is bound to the management and monitoring of chemical substances used.

Indeed, PIUSI is placed as a "downstream user", meaning that substances provided by our suppliers are used or prepared during industrial activities, and we expect to be notified of their security measures by means of an information sheet.

The substances that are used by PIUSI feature among those that the authorisation applies to; should some of the substances that are currently in use be as yet unauthorised, appropriate and immediate measures will be taken to have them replaced with authorised substances. PIUSI does not, in any case, use neither VHC substances nor SVHC substances.

A regulation adjustment plan has therefore been outlined, which includes the following steps:

- Decide who will be responsible for implementing legislation compliance, assigned to Mr Armando Moretti / Mr Donato Cavicchioli
- Identify and quantify the chemical substances used in our products and in our processes
- Establish and accomplish an appropriate relationship with our chemical substance suppliers in order to verify their adjustment to the regulation in question (cataloguing, verifying any notifications of registered substances, sending up-to-date and correctly-completed SAFETY SHEETS for products supplied to us, etc..)
- Initiate dialogue within the sales and supply chain in order to identify and plan responsibilities in terms of roles.

Regulatory updates, amending Regulation (EC) 1907/2006:

- EU Regulation n° 453/2010 of 20 May 2010
- EU Regulation n° 143/February 17, 2011 's 2011
- EU Regulation n° 2012/125 of 14 February 2012

These regulatory updates have included new substances in the Candidate List, in addition to those already present.

PIUSI also confirms that, as a result of these upgrades, in its products there isn't any presence of any substance "highly problematic" (SVHC).

Thanking you in advance for your kind attention to this matter, we remain at your complete disposal for any further information.

Yours sincerely,

Reach Manager

Armando Moretti
